Introduction	xi
What makes a report work	
R&R – Still the best report writer	
How to get ‘cooking’ with report writing	
Chapter 10 — Soup to Nuts Database Reporting	1
Using the Liveware Reporting Writing Guide	
Breaking a report down into its parts	
How each band behaves vis-à-vis the composite table	
Analysis report to compare groups	
Creating a ‘Summary Record’ Group Footer report	
Exercise Box #1: Do It On Purpose	
Chapter 11 — Supper Time	23
Date-controlled reports	
Calculations based on a key date	
Building an ‘audit’ type report	
Defining report control ‘calculated’ fields	
Setting controls into the report layout	
Assigning controls to the query / filter	
Exercise Box #2: Practice, Practice	
Building multi-grouping-level reports	
Manipulating date fields to create ranges	
Totaling on grouping levels based on calculated fields	
Chapter 12 — Totally Special Desserts	53
Deriving subset totals at a higher grouping level	
Layout for a ‘cross-tabulation’ type report	
Defining ‘conditional’ totals for cross-tabs	
Performing calculations on totals	
Deriving percentage changes over periods of time	
Creating correspondence ‘mail merge’ reports	
‘Pre-processed’ total definition and usage	
Deriving group percentages of an overall total	
Exercise Box #3: Total This!!	

	Page No.
Chapter 13 — Sausage Links	81
Table ‘Aliases’ and what they mean to the report	
Joining tables to extract information from multiple tables	
One-to-one vs. one-to-many relations	
Method of joining one-to-many natural relations	
The four, and only four, natural relations among ALL tables, everywhere	
Natural relation vs. join relation in R&R	
Don’t ForgeDOS #1: Why Don’t They Just Say So	
Partial match joins for complex index values	
SQL Nugget #1: Weakest Link	
Exercise Box #4: Getting Into Shape	
Chapter 14 — Great Food, Great Presentation	111
Building a ‘Statement’ report	
Using pre-processed totals in the report layout	
Use of an ‘average’ type total	
Drawing lines and boxes in the report layout	
Behavior of graphic elements	
Don’t ForgeDOS #2: All Boxed In	
Adding shading to boxes	
Use of ‘Line Logic’ to hide some lines in the printed report	
Creating a landscape ‘Register’ type report	
10 methods to fit extra items on a single band line	
Using the ‘page setup’ dialog box	
Multiple record band line methods	
Chapter 15 — Multi-Course Dining	143
When ‘multi-scan’ reporting is a must	
The multi-scan composite database shape	
When and why multi-scan is the best and only way	
SQL Nuggets #2: Getting Run Over	
Building a report with a multi-scan relation	
Consideration for sorting and grouping in a multi-scan report	
Application of the query for a multi-scan report	
Implications of totals in a multi-scan report	
Using the SCANNING() function to manage multi-scan branches	
Scan logic controls on band lines	
Exercise Box #5: Strictly Extra Credit	

	Page No.
Chapter 16 – Catering	175
<ul style="list-style-type: none"> Working with large database tables SQL Nuggets #3: To Index or Not To Index Using indexes to limit the master table Applying a ‘scope’ to the master table to improve performance Setting record and index value scope values Exercise Box #6: Which Fork? Advantages of a one-to-many relation with a master index scope 	
Chapter 17 – Leftovers	197
<ul style="list-style-type: none"> The 3 types of ‘history’ tables commonly used in reporting Reporting on transaction history tables Using transaction history and current transaction tables simultaneously Techniques for reporting on entity change history tables Use of the special PREVIOUS() calc function Exercise Box #7: Caramelized Data Creating data exports and extracts Application of a ‘text’ data extract Methods for data and worksheet exports Multiple columns on the record band 	
Chapter 18 — Nouvelle Cuisine	223
<ul style="list-style-type: none"> R&R under Windows 95/98 etc. New stuff in R&R Version 8 Charting and graphing options Placement of charts in the layout Enhancement suggestions Special editors note on R&R V8.1 and beyond 	
Aftertastes — The Future of Reporting	239
Appendix A — Four Basic Food Groups (part 2)	243
<ul style="list-style-type: none"> The four categories of data: nominal, ordinal, interval, ratio Use of categories in reporting: sorting, grouping, filtering etc. Manipulation techniques from one category to another Examples of data transformation calculation functions 	

	Page No.
Appendix B — Composite Database	267
R&R's composite database engine description	
Multi-scan group order controls	
Exercise Answers	273
Glossary	287
Hint Index	303
Subject Index	306
